

HORTI PACKAGING FOR ANTHURIUM

The Van der Windt range includes a number of items to pack Anthuriums.

ANTHURIUM BAGS

Traditionally, anthurium flowers are packed in transparent bags. In our own production we pay a lot of attention to the quality of these bags. The polyethylene material has to be antistatic so that the grower will be able to pack the flowers quickly. The bags have air holes and are available from stock in a number of sizes: >>

ITEM NO.	SIZE
5015100	200 x 160 + 60
5015150	200 x 210 + 60
5015200	250 x 210 + 60
5015300	300 x 210 + 60
5015400	300 x 240 + 60
5015450	300 x 310 + 60
5015500	350 x 340 + 60

On request these bags can also be produced with a bottom hole or centre hole.

FLOWER PHIALS

To provide the flowers with water during transport, the stem of the flower is put into a water-filled polypropylene flower phial with rubber cap. The flower phials are available with or without a (white or green) cap, in the following sizes: >>

ITEM NO.	PHIAL WITH CAP	QTY/BOX	QTY/PALLET
5001013	7,5 cc	4000	120000
5001010	10 cc	3000	90000
5001011	16 cc	2000	60000
5001012	24 cc	1500	45000
5001015	35 cc	1100	33000
5001014	60 cc	700	21000
5001016	120 cc	350	10500

FLOWPACK FILM

Flowpack film

These days, anthuriums are also packed mechanically in so-called flowpack film. Van der Windt stocks a range of BOPP quality films with the brand name Windtmac P[®] especially for this purpose.

Windtmac P[®] is approved by the Dutch Flower Auctions and has excellent anti-fog properties. The film is available with anti-fog coating on one or on both sides (with both sides anti-fog the rolls can be placed in the flowpack machine both ways).

BOXES AND INSULATION

Anthuriums are sensitive to cold. Van der Windt supplies anthurium boxes with accompanying insulation bags to protect the flowers against the cold during refrigerated transport.
